David Fix, Andy Bezener : Birds of Northern California (Lone Pine Field Guides) before purchasing it in order to gage whether or not it would be worth my time, and all praised Birds of Northern California (Lone Pine Field Guides):

59 of 60 people found the following review helpful. Very Best of Its KindBy David E. GoldweberI am an advanced-amateur birder, and I own four separate bird guides. I live in the Bay Area, and this is by far the guide I use the most. I've owned it for three years, and virtually every bird I've seen has been within its pages. It's very easy to navigate

because of its "thumbnails" in the opening pages - you can easily spot your bird there without having to flip through the whole guide. It's also very well written. It is always eloquent, occasionally humorous, and does a wonderful job of capturing the personality and "feel" of each bird. A problem I have with the overrated Audubon guide, and even sometimes with the fine Sibley and Stokes guides, is that they are too consistently technical. They rarely give unusual background or personality information about the birds. By contrast, this Fix-Bezener guide has something pleasurable to read in every entry. Some folks might want to supplement this guide with the Stokes Field Guide, Western Region, because it includes photographs. Or perhaps with a Sibley guide if you really want to get into the details. But for 90% of Northern California birders, this single guide will do just fine. 1 of 1 people found the following review helpful. I love it. I can find the names of birds ... By Judy LI have owned a copy of this book for a long time. I love it. I can find the names of birds outside at my feeders and those I see on hikes and photo expeditions. Clear, beautiful illustrations and lots of info to help you identify juveniles, visitors and year-round residents. I just bought a copy along with some other child-targeted items so my nephews' parents could look them up along with the kids and be ready with questions the kid-targeted items didn't cover. Big success! Great great book. 3 of 3 people found the following review helpful. Since I bought this book I now have a set of binoculars and enjoy looking up the species. By Jeanine Ollivier-Rollins When I moved to the country I saw so many birds that I didn't know a hawk from an eagle. Since I bought this book I now have a set of binoculars and enjoy looking up the species, where they migrate, their sounds and habits. It's fun now knowing the differences instead of "guessing".

Learn about 320 species of Northern California birds in fascinating detail. Descriptions, illustrations and range maps help you identify birds and understand their habits. A checklist helps you keep a list of your birding accomplishments. Perfect for beginner birders and beyond.

Few field guides contain this level of useful information...a welcome addition to any birder's fanny pack. --California Wild magazine Here is a superb introduction to the regularly occurring birds of Northern California that deserves a place in every birder's library. --Sierra Foothill Audubon Society This is a beautiful and cleverly designed guide. --San Francisco Chronicle Here is a superb introduction to the regularly occurring birds of Northern California that deserves a place in every birder's library. --Sierra Foothill Audubon Society Few field guides contain this level of useful information...a welcome addition to any birder's fanny pack. --California Wild magazine About the Author DAVID FIX first learned his birds in the Pacific Northwest. From his sandbox, at age four or five, he recalls hearing Song Sparrows, but it wasn't until his teens that he began looking seriously at birds. Jobs as a timber cruiser and tree planter in the Oregon and Washington Cascades gave him much early experience with forest birds. More recently he has complemented his work in wildlife biology with extensive writing. For 20 years, David has been a subregional editor for the quarterly journal, North American Birds, and he contributes frequent essays, poetry and artwork to the Sandpiper, the newsletter of the Redwood Region Audubon Society. With his partner, Jude Claire Power, and others, David is working to publish the results of a five-year Humboldt County Breeding Bird Atlas project. David and Jude make their home in Bayside, California. ANDY BEZENER is a biologist and the author of nine nature guides for Lone Pine Publishing.
