incredible journey of the Corps of Discovery so much more impressive and memorable for historians -- both amateur and professional!3 of 5 people found the following review helpful. Previous Review Is IncorrectBy Mark LindamoodDuring the period covered by this volume, Lewis and Clark were beyond the portage around Great Falls. During the time described in the subtitle to this volume, July 28 - November 1, 1805, LC were leaving Three Forks, crossing the continental divide, and meeting the Shoshone Indians, with whom they traded for horses with which to cross the Bitterroot Mountains. The portage around Great Falls is described in Volume 4 of Moulton's edition of the journals.11 of 13 people found the following review helpful. A "MUST" read!By A CustomerThis volume details the thoughts of Lewis and Clark, and others as they determine which major waterway to follow to the Great Falls of the Missouri, their first significant obstacle. The portage around the great falls is more than they imagined, and is explained in great detail. It explores the many new discoveries in the interior of what is now central and western Montana. This volume also further expounds the growing problems with the unpredictable 'white bear', and the harshness of spring and summer weather in Montana.

The first four volumes of the new edition of the Journals of the Lewis and Clark Expedition have been widely heralded as a lasting achievement in western history studies. This eagerly awaited fifth volume begins on July 28, 1805, more than one year after Meriwether Lewis and William Clark set out on their epic journey. The expedition now enters upon perhaps the most difficult part of its route, from the Three Forks of the Missouri River in present-day Montana, over the Bitterroot Mountains, and to the Cascades of the Columbia River on today's Washington-Oregon border. The explorers encounter Shoshone, Flathead, Nez Perce, and other Indian tribes, some of whom have never before met white people.Incorporating a wide range of new scholarship dealing with all aspects of the expedition, from Indian languages to plants and animals to the geographical and historical context, this new edition expands and updates the annotation of the last edition, published early in this century.

About the AuthorGary E. Moulton is Thomas C. Sorensen Professor of American History at the University of Nebraska and recipient of the J. Franklin Jameson Award of the American Historical Association for the editing of these journals.
