F. Robert van der Linden : The Nation's Hangar: Aircraft Treasures of the Smithsonian before purchasing it in order to gage whether or not it would be worth my time, and all praised The Nation's Hangar: Aircraft Treasures of the Smithsonian:

0 of 0 people found the following review helpful. A good photo book of NASM collection. By BillHYet another in a long series of photos of the collection of the National Air and Space Museum. Worth a look if you haven't seen the previous books or haven't been to the museum for a while. High quality photos well printed on good paper. 0 of 0 people found the following review helpful. Great Book! By James Smithson Gave it as a gift to a person who worked on the restoration of one of the highlights at "The Nation's Hangar." 0 of 0 people found the following review helpful. If you love planes and go to DC... get this first By JBazI have to say after reading reviews and advice from my more knowledgeable aviation friends, this was a superb book to read before visiting the Steven F. Udvar-Hazy Center also known as the National Air and Space Museum at the Dulles airport. It doesn't cover every plane in the hangar, but it really highlights the more significant ones that had historical impact on the world in both the military and commercial segments. I would highly recommend buying a used book since most of the time, books that are text book thick, such

as this, tend to be taken better care than smaller, paper back books. Save some money, learn some history and hit the museums! My other recommendation is to pick up *Flight: The Complete History* by R. G. Grant (Shoot, anything made by Grant is pretty interesting) as its really a great cliff notes to all of aviation history.

The Nation's Hangar: Aircraft Treasures of the Smithsonian offers a fascinating textual and visual history of civilian, military, and commercial aviation from the earliest balloon flights to today's most advanced aircraft. The Nation's Hangar charts the awe-inspiring history of flight around the world. F. Robert Van Der Linden, a Smithsonian curator and leading expert on aviation history, explains the fascinating stories behind aviation's great technological advances and provides historic and social context that highlights the many ways in which these innovations have changed the course of human history. *The Nation's Hangar* is also a visual delight. The Smithsonian aircraft collection has never looked so compelling and sleek. *The Nation's Hangar* is a must-have for that fly boy or fly girl in your flight pattern.

LIBRARY JOURNAL, Starred *The Nations Hangar: Aircraft Treasures of the Smithsonian* takes the reader on a fascinating journey through 60-odd years of aeronautical history. He reviews the priceless aircraft and artifacts currently housed in the Steven F. Udvar-Hazy Center, a mammoth four-hangar repository, and discusses the centers accession criteria, principles of preservation, space, display, and funding challenges. Van der Lindens informative narrative acquaints readers with such period exhibits as international military fighters and bombers, passenger liners, helicopters, seaplanes, recreational and racing craft, utility flyers such as crop dusters, and the worlds fastest jet-powered manned plane the U.S. SR-71 Blackbird. Equally compelling is his treatment of the talented people who bankrolled, designed, maintained, flew, and finally restored these magnificent birds to their pristine glory. His volume is replete with more than 225 full-color illustrations and 75 black-and-white photographs a visual feast. VERDICT This splendidly crafted pictorial tribute to a national treasure will appeal to the full spectrum of aviation scholars, collectors, and dedicated buffs. Highly recommended. John Carver Edwards, Univ. of Georgia Libs., Cleveland American Heritage As the National Air and Space Museums director boasts in his foreword, the Smithsonian was interested in aeronautical matters even before aviation was invented, having begun collecting Chinese kites in 1876. This descriptive catalogue celebrates the latest addition to Smithsonians family of museums, the huge NASM annex known as the Steven F. Udvar-Hazy Center, located 30 miles from the National Mall at Dulles International Airport. The book is instructive, straightforward, laudatory, and colorful in its photographs. Notably, the chapter on Restoration and Conservation purposefully describes the criteria for acquiring, stabilizing, and preserving artifacts. Proper stewardship does not, for example, make all old objects look spanking new. Much of value of museum-quality holdings lies in their antiquity, including the scars of their experience. At best, a museums proper goal in handling some objects is simply to stabilize them in perpetuity, while a proper activity is not simply to collect as many examples of this-and-that as it can find. NASM consequently has defined clear criteria historical, technological, and practical standards to govern its acquisitions. While here is the Enola Gay, the plane that dropped the first atomic bomb in anger, and there the Concorde, the fastest commercial airliner ever, museums are not properly halls merely of oh, wow! They must also be educational, historiographic, and conservative in the words original sense. Discussions of *The Early Years of Flight* and the *The Golden Age of Flight* provide overviews of those eras, with heavy emphasis on the airplanes and other flying machines on display at the Udvar-Hazy Center. Three chapters are devoted to military aircraft and the exploits of U.S. aviators in wartime. About the Author F. ROBERT VAN DER LINDEN is the curator of special purpose aircraft and commercial aviation in the Smithsonian Institution National Air Space Museum's Aeronautics Division. He is also the author of *Best of the National Air Space Museum*. The author lives in Boyds, Maryland.
